This heading covers a group of two-wheeled motorised vehicles which are essentially designed for carrying persons.

In addition to motorcycles of the conventional type, the heading includes motor-scooters, characterized by their small wheels and by a horizontal platform which joins the front and rear portions of the vehicle; mopeds, equipped with both a built-in engine and a pedal system; and cycles fitted with an auxiliary motor.

This heading also covers two-wheeled, electrically-powered transportation devices, designed for carrying a single person, for use within low speed areas such as pavements (sidewalks), paths, and bicycle lanes. Their technology allows the rider to stand upright while a system composed of gyroscope sensors and multiple onboard microprocessors maintains both the device's and rider's balance on two independent, non-tandem wheels.

Motorcycles may be equipped to protect the driver against the weather or be fitted with a side-car.
