Monitors, projectors and television sets utilize different technologies, such as CRT (cathode-ray tube), LCD (liquid crystal display), DMD (digital micro mirror device), OLED (organic light emitting diodes) and plasma, to display images.

Monitors and projectors may be capable of receiving a variety of signals from different sources.....

(A) MONITORS OF A KIND SOLELY OR PRINCIPALLY USED IN AN AUTOMATIC DATA PROCESSING SYSTEM OF HEADING 84.71

This group includes CRT and non-CRT (e.g., flat panel screen) monitors which provide a graphical presentation of the data processed. These monitors are distinguishable from other types of monitors (see (B) below) and from television receivers. They include :

(1) *Those monitors which are capable of accepting a signal only from the central processing unit of an automatic data processing machine and, therefore, are not able to reproduce a colour image from a composite video signal whose waveform conforms to a broadcast standard (NTSC, SECAM, PAL, D-MAC, etc.). They are fitted with connectors characteristic of data processing systems (e.g., rs-232c interface, din or sub-d connectors) and do not have an audio circuit. They are controlled by special adaptors (e.g., monochrome or graphics adaptors) which are integrated in the central processing unit of the automatic data processing machine.*
