Vinyl composition tile (VCT) is a finished [flooring](#) material used primarily in commercial and institutional applications. Modern [vinyl floor tiles](#) and sheet flooring and versions of those products sold since the early 1980s are composed of colored [polyvinyl chloride](#) (PVC) chips formed into solid sheets of varying thicknesses (1/8" is most common) by heat and pressure. Floor tiles are cut into modular shapes such 12" x 12" squares or 12" x 24" rectangles. In installation the floor tiles or sheet flooring are applied to a smooth, leveled sub-floor using a specially formulated vinyl [adhesive](#) or tile mastic that remains pliable. In commercial applications some tiles are typically waxed and buffed using special materials and equipment.

PVC Tiles

Polyvinyl chloride (PVC) tiles are a commonly used [floor](#) finish made from [polyvinyl chloride](#). Due to the small size of the [tiles](#), usually 150mm, 225mm and 305mm, any damage can soon be repaired by replacing individual tiles (as long as some spares are kept).
